

I am an XM subscriber, as well as everyone in my family. I live in an area where the market is unable to support XM's local traffice and weather service but would gladly welcome it. One reason I request that you withdraw the NAB petition 04-160 is that it is in fact broadcast on a national basis. I like the service for the fact that I can receive this information prior to reaching an area where it is offered. For and example, I travel to Dallas, TX often and find the information ahead of time interesting and imformative. Also I do not see this being any different from the satellite TV corporations (i.e. DirectTV , Dish Network) from offering local networking to the larger markets. I do urge you to dismiss this petition. It seems that these guys scared to compete in this free market.
